

**MagaDye™ 613-ddCTP**Catalog number: 17060  
Unit size: 5 nmoles**Product Details**

---

Storage Conditions	Freeze (<-15 °C), Minimize light exposure
Expiration Date	12 months upon receiving

**Chemical Properties**

---

Appearance	Liquid
Soluble In	Water

**Applications**

---

Sanger sequencing, also known as the chain termination method, is a technique for DNA sequencing based upon the selective incorporation of chain-terminating dideoxynucleotides (ddNTPs) by DNA polymerase. It was developed by Frederick Sanger and colleagues in 1977. Although the newer NGS technologies are becoming common in clinical research labs due to their higher throughput capabilities and lower costs per sample, Sanger sequencing with 99.99% accuracy is still the “gold standard” for clinical research sequencing. The four distinct fluorescent ddNTPs (labeled with BigDye<sup>®</sup>, BigDye<sup>®</sup> is the trademark of ThermoFisher) are the critical components for performing Sanger sequencing. MagaDye™ 613-ddCTP is equivalent to BigDye dROX color with almost identical spectra.
