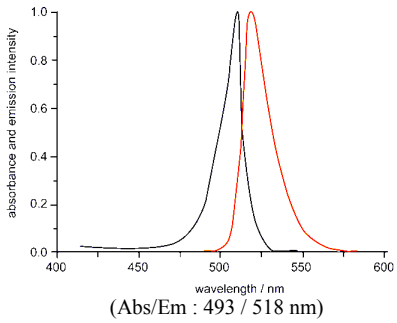
FluoProbes® 488 Donkey F(ab')$_2$ Anti-Mouse IgG (H+L) (cross adsorbed)

Product information

Name	**FluoProbes® 488 Donkey F(ab')2 Anti-Mouse IgG (H+L) (min X Bov,Ck,Gt,GP,Hms,Hrs,Hu,Rat,Rb ,Shp Sr Prot)**
Cat. number	FP-SA4120
Quantity	0.3mg
Physical state	Freeze dried powder
Buffer	PBS (NaCl 150 mM, Phosphate 10 mM pH 7.5, containing 0.2% BSA, 0.09% Azide)
Reconstitution	0.3ml distilled water
Working solution	1:50-1:500 for most applications
Expiry date	one year from date of reconstitution
Storage	+4°C, -20°C with 50% glycerol

FluoProbes® 488



(Abs/Em : 493 / 518 nm)

The FluoProbes® 488 is compatible with **standard filters for fluorescein.** It is **photostable**, pH independent and **hydrophilic** for a lower background.

Description

Introduction:
FluoProbes® secondary antibodies are labeled with a selection of FluoProbes® powerful dyes. These antibodies will suit most classical immunodetections (Fluorescence Microscopy, Cytometry, IF,….).

AffiPure antibodies:
FluoProbes® uses antibodies obtained by hyper immunization and affinity purification. These antibodies offer : high affinity, high specificity and very low background.

Anti-IgG (H+L):
This antibody reacts with both the heavy and light chains of the IgG molecule. Anti-IgG (H+L) also reacts with other immunoglobulin classes (e.g. IgM, IgA, etc.).

F(ab')2:
These antibodies can be used for applications where Fc fragments can cause non-specific binding (i.e. to cell receptors, forming agregates in flow cytometry).

Preadsorbed antibodies: (MinX… Sr Prot)
These antibodies are particulary useful when cross-reactivity can occur between the secondary antibody and other molecules such as primary antibody, in multiple labeling applications, or antigens.
