

Chemistry - Green Chemistry

Ionic Liquids

Characteristics

An ionic liquid is a liquid that essentially contains only ions.

Ionic liquids are electrically conductive and have extremely low vapor pressure. Additional properties are diverse. Many have low combustibility, excellent thermal stability, a wide liquid range, and favorable solvating properties for diverse compounds. Many classes of chemical reactions, such as Diels-Alder & Friedel-Crafts reactions, can be performed using ionic liquids as solvents.

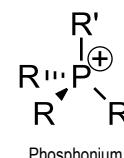

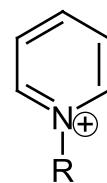

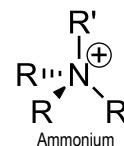

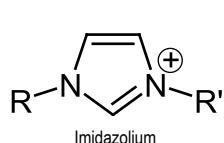

Recent work has shown that ionic liquids can serve as solvents for biocatalysis. Because of their distinctive properties, ionic liquids are attracting increasing attention in many fields, including organic chemistry, electrochemistry, catalysis, physical chemistry, and engineering.

Safety and Green Chemistry

Due to their non-volatility (effectively eliminating a major pathway for environmental release and contamination), ionic liquids have been considered as having a low impact on the environment and human health, and thus recognized as solvents for green (environmental) chemistry.

Whilst maintaining the ability to dissolve a wide range of organic /inorganic compounds, the extremely low vapour pressures, thermally stability & non-flammable characteristics of ionic liquids(unlike volatile organic solvents), do not vaporise into the air & effectively eliminate a major route of environmental contamination.

Cations

Anions

Acetate

Tetrafluoroborate

Chloroaluminates

Hexafluorophosphate

Bis(trifluoromethanesulfonyl)imide

Triflate

R, R' : alkyl chain (Me, Et, Bu..., C12-C18).
